URETHRAL ANAESTHESIA
that is adequate yet safe

A publication in 1963* drew attention to the occurrence of collapse following the urethral administration of anaesthetic jellies containing 2 per cent. of lignocaine hydrochloride. Work conducted in a leading London hospital has now indicated that urethral anaesthesia can be reliably induced, without risk of complications, by the administration of 15 ml. of a jelly containing only 1 per cent. (150 mg. per tube) of lignocaine hydrochloride together with 0.25 per cent. of chlorhexidine gluconate solution B.P. 1963 as an antiseptic.

Lancet, (1963), i, 890

This preparation is available under the name:

LIDOTHESIN 1% *ANTISEPTIC* GEL

and is available in tubes containing 15 ml. which are equipped with specially-designed plastic applicators to facilitate urethral insertion.

TEXTBOOK OF VENEREAL DISEASES & TREPONEMATOSES

by R. R. WILLCOX, M.D.

Extracts from Reviews of the 2nd Edition.

"All in all this work deserves to become the standard textbook on its subject and now that so many dermatologists have unfortunately had no practical experience of VD this book can be recommended to them as a work of reference." *British Journal of Dermatology.*

"The whole work is illuminated by a vivid practical approach and a notable freedom from dogma."
Proceedings of the Royal Society of Medicine.

"Dr Willcox is widely known through his many travels and publications and this second edition of his textbook is sure of a global welcome. It is recommended to all who are concerned with the diagnosis and management of venereal infections and the treponematoses throughout the world." *British Journal of Venereal Diseases.*

"Every student and practitioner will find much to interest them in this important work ... This is quite the best book in English dealing with all the many facets of venereal diseases today."
The British Journal of Surgery.

"This is probably the best book on the subject. It can be recommended with confidence as a textbook for venereologists and as a work of reference for physicians and public health workers." *The Practitioner.*

"This must surely be the most comprehensive book on the subject in the English language published in the last 50 years. This is a book which can be confidently recommended to all venereologists, to the senior ones as a book of reference, and to the junior ones as a mine of information on all aspects of the vast subject. *Tropical Diseases Bulletin.*
